

Executive Protection

Tailored security solutions  
for high-profile individuals

Secure Transportation

Secure ground operations  
and mobility without risk

Residential security

Securing private residences  
and high-value properties

Event Security

Seamless security for  
exclusive events

# THE ART OF PROTECTION

## THE STANDARD OF SECURITY EXCELLENCE

*For leaders, public figures and exclusive clientele who demand  
the highest standards of security, wherever they operate.*

OPERATIONAL CAPABILITIES  
ACROSS MORE THAN  
100 COUNTRIES

# WELCOME LETTER

Over the past 20 years, I have personally operated across multiple continents, working in complex, high-exposure environments alongside public figures, executives and private clients requiring absolute discretion and reliability.

This field experience has shaped a clear conviction that effective protection is never improvised. It is built on anticipation, preparation and the ability to adapt in real time to evolving environments.

I created IPS BODYGUARD to reflect that standard and to build a premier international firm specialising in global security management and tailored safety solutions for UHNWIs, Fortune 500 executives and public figures.

Our role is not simply to deploy security resources. It is to design, coordinate and supervise protective frameworks adapted to each jurisdiction, risk profile and operational context. We apply strict standards to our personnel selection, working only with individuals who demonstrate the required mindset, reliability, integrity and professionalism.

Our approach combines human intelligence, risk analysis and field experience. Each client, each context and each environment requires a precise and tailored response.

With operational capabilities across more than 100 countries, IPS BODYGUARD combines global reach with local intelligence.

In a world where exposure increases risk, protection must remain intelligent, measured and strategically managed.

Wherever our clients operate, the same standards apply.

*Laurent Dequatremard*

Laurent DEQUATREMARD  
CEO, IPS BODYGUARD

# Global Operations

Operating Across 100+ Countries, Delivering Seamless Global Security Solutions

Operating internationally requires more than mobility. It requires understanding environments, cultures, regulations and human dynamics before deployment begins.

With operational capabilities across more than 100 countries, IPS BODYGUARD ensures seamless global coverage and consistent operational standards.

IPS BODYGUARD supports clients across multiple countries by preparing operations in advance, securing local resources and ensuring continuity of protection regardless of location.

Each international mission is structured around risk evaluation, logistical coordination and local intelligence, as well as a precise assessment of the client's profile, environment and exposure.

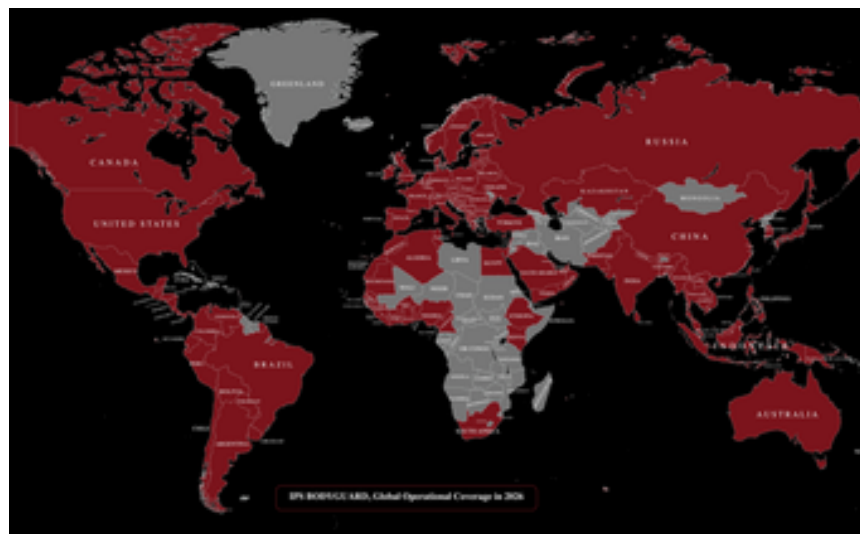

Operations are designed to anticipate challenges related to travel, infrastructure, legal constraints and exposure levels. This allows protection to remain stable and controlled, even when environments change rapidly.

IPS BODYGUARD relies on a trusted international network of partners, operators and local specialists, enabling coordinated on-site execution and rapid deployment worldwide.

Whether for executive travel, international events or long-term assignments abroad, every assignment is managed with the same level of preparation and control. Operations are conducted within clearly defined frameworks ensuring confidentiality, consistency and full control across all environments.

Global operations demand clarity of command and communication. Roles, escalation paths and decision-making processes are defined before execution begins.

This structure allows our clients to move, operate and engage internationally with confidence, knowing that protection remains uninterrupted.

*Operational excellence across borders*

# Executive Protection

Protection for those who operate above the ordinary

- Executive personal protection
- International Mobility Support
- Corporate & Public Exposure Management
- Sensitive and complex environments
- Advance reconnaissance
- Country risk analysis
- Structured operational reporting

**Situational Analysis:**

Each mission begins with a detailed assessment of exposure, environment and behavioral patterns. No protection plan is deployed without a clear understanding of context and risk.

**Advance Reconnaissance:**

On-site assessment and route validation conducted by a dedicated team ahead of every movement. Nothing is left to chance before the principal arrives.

**Protective Deployment:**

Protection is adapted to your lifestyle. Visibility, distance and interaction are continuously adjusted to remain effective without intrusion.

**Dynamic Adaptation:**

Close protection is not static. Movements, schedules and environments evolve, and protection evolves with them. Conditions are continuously reassessed and adjusted in real time.

**Operational Reporting:**

Clear communication channels and structured reporting ensure that relevant stakeholders remain informed. Information is shared with clarity, relevance and purpose.

**Professional Conduct:**

Beyond physical presence, operatives rely on judgment, anticipation and restraint. The objective is simple: ensure safety while preserving comfort, privacy and freedom of movement.

**Absolute Confidentiality:**

All missions are conducted under strict confidentiality protocols. Information, routines and identities are protected before, during and after every operation.

*Built for leaders. Delivered without compromise.*

# Secure Transportation

Secure transportation designed for leaders who expect precision, discretion and continuity at every stage of their movement.

- Secure executive transportation
- Dedicated security-trained drivers
- Route planning and validation
- Airport and protocol coordination
- International travel logistics
- Continuous coordination with protective detail

### Strategic Mobility:

Secure transportation extends beyond the vehicle. It is the structured management of movement, timing and exposure from departure to arrival.

### Driver Integration:

Security-trained drivers operate in full coordination with the protection detail. Most are trained in counter-surveillance, evasive driving and threat recognition, making them an integral part of the operational team.

**Integrated Command & Reporting:** Transport operations remain in continuous coordination with the protection detail. Movement updates and situational changes are communicated through structured operational channels.

**Vehicle Standards:** Operations are conducted in high-specification vehicles selected for safety, comfort and operational flexibility. Mercedes S and V Class, Range Rover and armored options are available according to the mission profile and client requirements.

**Route Management:** Primary and alternative routes are evaluated in advance. Traffic, infrastructure and environmental variables are continuously monitored, ensuring seamless transitions between locations without vulnerability gaps.

*Mobility without vulnerability*

# Residential Security

Because your properties deserve the same level of excellence  
as every other environment you spend time in

- Private residences and estates
- Corporate offices and facilities
- Retail and high-value commercial premises
- Temporary or long-term residential and site deployments
- Controlled access and perimeter supervision
- CCTV and alarm system coordination

## Site Assessment

Each deployment begins with a detailed evaluation of the property. Access points, perimeter exposure, internal circulation and surrounding environment are reviewed to define the appropriate security posture.

## Guarding & Presence

Security personnel provide a constant and professional presence. Their role combines deterrence, observation and immediate response while preserving the comfort and privacy of residents.

## Access Control

Entry points are monitored and visitor access is verified. Movements within the property are managed to ensure security without disrupting daily life.

## Electronic Security

CCTV and alarm systems can be deployed independently or combined with on-site security personnel to reinforce property protection.

## Monitoring & Reporting

Operations remain under continuous supervision. Relevant information is communicated through structured reporting channels, ensuring transparency and operational continuity.

Residential security can extend across a wide range of properties and environments. From private villas and luxury estates to corporate offices, construction sites and high-value retail locations, IPS BODYGUARD provides structured on-site security designed to protect people, property and daily operations.

Deployments can be permanent or temporary, including private gatherings or events held at the residence. Each operation is adapted to the property, the exposure level and the expectations of the client, ensuring security without disrupting the normal life of the location.

*Security designed for estates, villas and residences that  
require absolute discretion and reliability*

# Risk Assessment & Security Audit

Strategic evaluation of exposure, vulnerabilities and operational risks to support informed decisions and proactive security planning.

## Risk Analysis

Security decisions should never rely on assumptions. Each assessment begins with a structured review of the environment, local conditions, exposure levels and operational constraints. This analysis allows potential vulnerabilities to be identified before operations begin.

## Security Audit

Properties, offices and operational sites are evaluated to identify weaknesses in physical security, access control and existing procedures.

The objective is to provide clear recommendations that strengthen security while remaining adapted to the environment and daily operations.

## Intelligence & Environmental Awareness

Accurate information is essential to anticipate potential threats.

Through open-source intelligence, local insights and environmental analysis, IPS BODYGUARD gathers the information required to support informed security decisions.

*Understanding risk before  
it becomes exposure*

## Scan Agent

In dynamic or crowded environments, a dedicated Scan Agent focuses exclusively on behavioural observation.

Positioned within the environment, the Scan Agent identifies anomalies, suspicious behaviour and potential threats in real time, allowing the protection team to react before a situation escalates.

This role adds an additional layer of awareness and significantly strengthens situational control during movements, public appearances or high-density environments.

Risk assessment provides the foundation for all security operations.

By understanding environments, vulnerabilities and exposure levels in advance, protection strategies can be structured with clarity and precision.

# Event Security

Security designed for events where reputation, investment and guest experience cannot be compromised.

## Security Scope

- Private and corporate events
- Public appearances and ceremonies
- Conferences, summits and seminars
- Fashion shows and cultural events
- Restricted-access and VIP zones

### Event Preparation

For exceptional or sensitive events, IPS BODYGUARD can become involved ahead of the event itself.

Advance visits, venue analysis and coordination with organisers allow the security structure to be prepared in detail before guests arrive.

This level of preparation is particularly relevant for large-scale, high-profile or complex events.

### Professional Presence

Event security requires personnel who reflect the standard of the event itself.

Our agents maintain a professional appearance, impeccable presentation and respectful interaction with guests, organisers and venue staff while ensuring a reassuring security presence.

### Operational Coordination

Security teams operate in coordination with organisers, venue management and operational staff such as hosts, technical teams, fire safety personnel, valet services or local authorities when required.

This coordination allows security to integrate naturally within the overall organisation of the event.

### Scan Agent

For dynamic or high-density environments, a dedicated Scan Agent team can be deployed within the crowd.

They focus exclusively on behavioural observation, monitoring movement patterns and identifying unusual or suspicious behaviour.

When anomalies are detected, information is immediately relayed to the team leader, allowing the security team to adapt positioning or intervene early if required.

### Communication

Clear communication between team members is essential during events.

Operational updates can be shared in real time between agents and team leaders, ensuring that relevant information reaches organisers or designated contacts when necessary.

This constant communication allows teams to react quickly while maintaining a smooth and controlled event environment.
